

```
async function returnImmediately () {  
  try {  
    1  
    return Promise.reject(new Error('deliberate'))  
    3  
  } catch (err) {  
    2  
    console.log('caught exception')  
  }  
}
```

- 1 create promise for later execution
- 2 check for error (none)
- 3 raise exception
