

## **example-plain.js**

### **Demonstrate documentation generator.**

**main:** Main driver.

**parseArgs:** Parse command line.

- `args (string[])`: arguments to parse.
- `defaults (Object)`: default values.

Returns: program configuration object.

**process:** Transform data.

- `input (stream)`: where to read.
- `output (stream)`: where to write.
- `op (class)`: what to do. Use `@BaseProcessor` unless told otherwise.

## **util-plain.js**

### **Utilities to demonstrate doc generator.**

**BaseProcessor:** General outline.

**constructor:** Build processor.

**run:** Pass input to output.

- `input (stream)`: where to read.
- `output (stream)`: where to write.
