```
                    loader.js                              source.js

1   const loadModule = (filename) => {          module.exports = 'hello'

2      const source = ...read file...

3      const result = {}

4      const fullText = `...`

5      eval(fullText)

       return result.exports

    }
```

	variables		values
1	filename	⟶	"source.js"
2	source	⟹	"module.exports = 'hello'"
3	result	⟶	{}
4	fullText	⟶	((module) => {module.exports = 'hello'})(result)
5	result	⟹	{exports: 'hello'}
